

Write a Python program that takes a student's marks in three subjects as input.

- If the average is greater than or equal to 90, print "Grade: A".
- If the average is between 80 and 89, print "Grade: B".
- If the average is between 70 and 79, print "Grade: C".
- Otherwise, print "Grade: Fail".

```
print(f"{key}: {value}")

Alice
Photography
25
name: Alice
age: 25
city: New York
profession: Engineer
hobby: Photography

[9]: a = float(input("Enter marks for Subject 1: "))
      b = float(input("Enter marks for Subject 2: "))
      c = float(input("Enter marks for Subject 3: "))

      avg = (a + b + c) / 3

      if avg >= 90:
          result = "A"
      elif 80 <= avg < 90:
          result = "B"
      elif 70 <= avg < 80:
          result = "C"
      else:
          result = "Fail"

      print(f"Grade: {result}")

Enter marks for Subject 1: 68
Enter marks for Subject 2: 75
Enter marks for Subject 3: 90
Grade: C
```
